Re: Latest water update

Please rest assured that we are working around the clock to address this issue. Our staff at the water department has been manning the plant 24 hrs a day all week long and we also have been in the field from sunup to sun down. We have identified problem areas and made repairs. At this point we are continuing to isolate areas of the system and use sound equipment to identify problems. As my previous press releases have stated we are asking people to continue to conserve water and the boil water order is in place until further notice. Once we have protected the integrity of the water distribution system then the County Health Department will begin sampling and testing the water and it will be their call as to when the boil water order is lifted. At this time we have no idea when that will be. When there is any further information available we will make it available to the public and encourage everyone to visit the Village website at www.rhinebeckvillage.org for the latest up dates. While there please opt in to receive the latest Village information automatically. Thank you for your patience and cooperation during this difficult time.
